The AIDS and Cancer Specimen Bank (ACSB) is a repository for fluid and tissue specimens from individuals with HIV and non-HIV malignancies. It is a research resource for scientists to study the pathogenesis of cancers, including those associated with Human Immunodeficiency Virus (HIV) and Human Herpesvirus type 8 (HHV-8). The ACSB receives specimens from a variety of sites, including longitudinal and cohort studies. Associated clinical information is also available in many cases. The ACSB is a repository for fluid and tissue specimens from individuals with HIV and non-HIV malignancies.
