The Ballroom Community Project: Social Networks and Social Support for Young African American MSM

Investigator: Emily A. Arnold

Project Partners: David L. Williams and Edward Blount

This research investigates the relationship between social networks, social support, and HIV-related risk behavior among young African American MSM who participate in the Ballroom community. The Ballroom community consists of houses, figurative and sometimes literal homes, for queer youth of color, and the elaborate balls they host and compete in. The Ballroom community exists in urban centers across the US, and provides African American queer youth with support for same-sex desire and identity, along with multiple forms of support for HIV prevention.

This research looks at the forms of social support that young men receive through their involvement in the community, particularly with regard to HIV-related risk behavior. The study will be carried out in three phases:

1) an ethnographic phase to determine the forms social networks and social support take with young African American MSM in the Ballroom community;

2) a phase to develop and adapt appropriate scales of social networks and social support for a young African American MSM population; and

3) a cross-sectional survey of social networks within young African American MSM Ballroom communities to determine the association of social networks and social support with HIV-related risk behavior. The data accumulated during this study will be used as the basis for developing an intervention tailored specifically to the Ballroom community. Approximately 300 young African American MSM will be recruited into the study, which will take place in the San Francisco Bay Area.
